首先来到这个页面 https://screepspl.us/services/grafana/

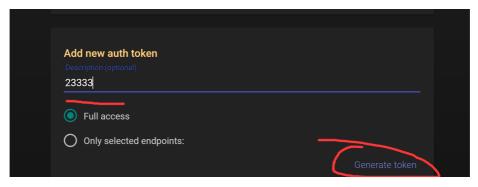

然后<u>https://screepspl.us/signup/</u>注册一下screepsplus

注册好了进这个https://screepspl.us/services/hosted-agent/

首先要在screeps.com申请一个token

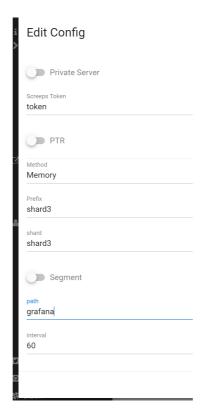

然后会弹出来一个提示框 你要自己把token复制下来存好

回到https://screepspl.us/services/hosted-agent/

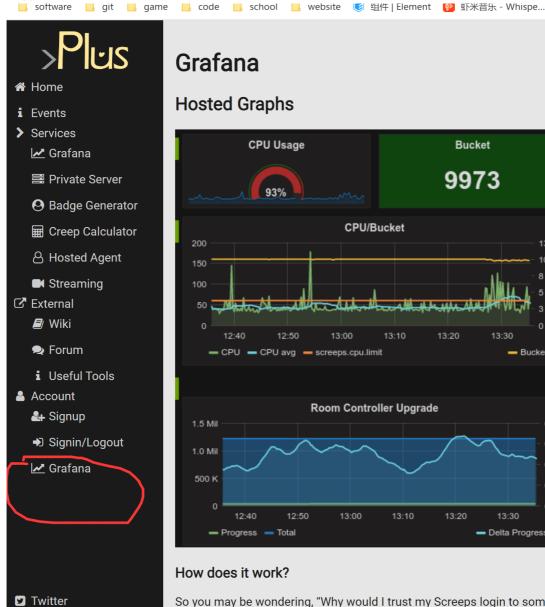

填好了之后右下角test一下确定token可用 然后点save save可能很慢

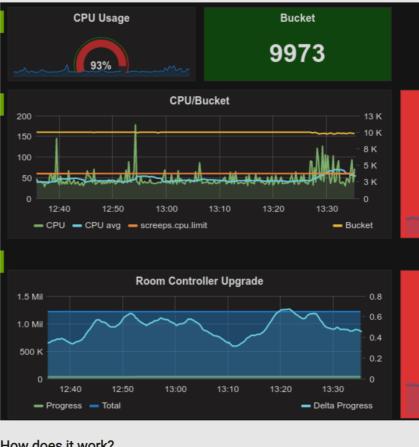

然后你就会发现你有了

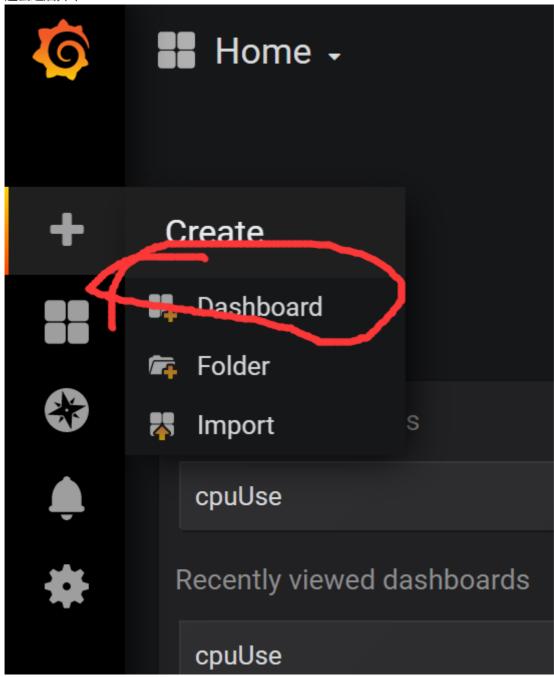

Grafana

Hosted Graphs

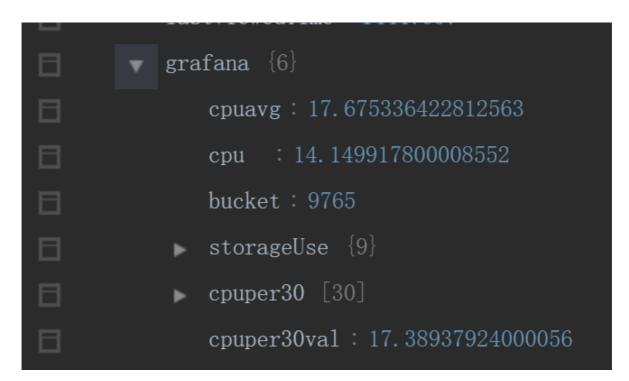

How does it work?

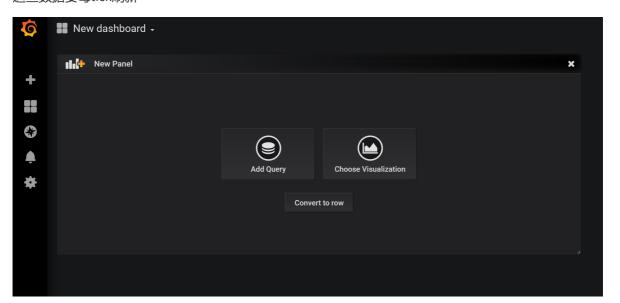

So you may be wondering, "Why would I trust my Screeps login to someone else

然后修改你的代码 给一些数据准备Memory.grafana

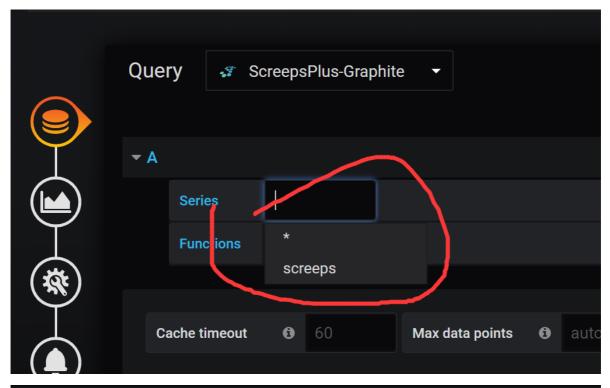

这些数据要每tick刷新

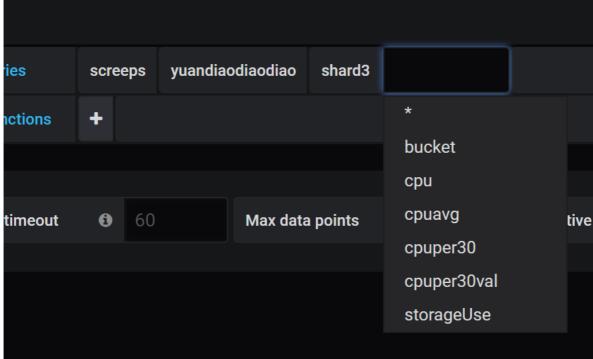

add query

然后会有自动提示

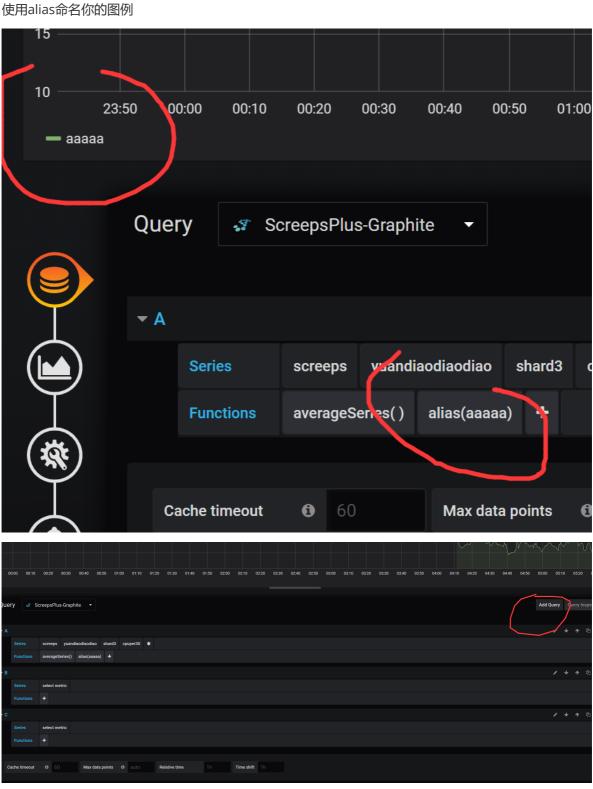

跟着提示走下去 就到了你的Memory.xxx的对象下面

对于单个值可以直接输出

对于数组/对象可以选*然后求平均或者全部显示之类的

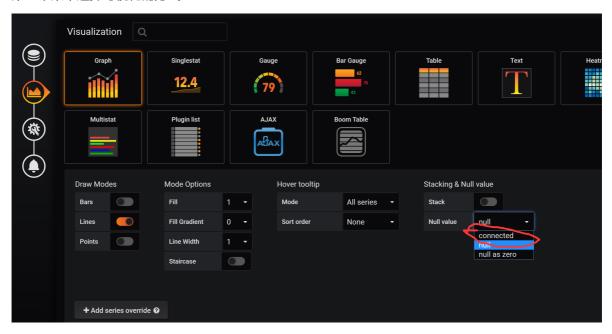

addquery展示多组数据

第二个菜单选择可视化的方式

connected可以把散点插值成连续的线

一个dashbord可以有很多个panel

screepsplus最多每分钟只能获取一次memory

所以计算瞬时cpu需要把最近的(60/ticktime)次cpuUsage做个平均数才能输出比较稳定的cpu

做好之后别忘了保存 就能

在home上找到你的dashbord了

附赠一下我刚配的垃圾可视化

要是想每tick都统计的话可以自己搭私服在github上有screeps-grafana的docker screepsplus好像也有一个打包好的东西在https://github.com/screepsplus/node-agent
